### 1.38 RETRIEVE SINGLE PERSON LAST UPDATE TIMESTAMP

This request will return the last update timestamp for a single person using the Person Id retrieved previously. The timestamp returned is required when updating a person record and is used to check that the record being updated has not been modified since the record was retrieved.

#### 1.38.1 URI REQUEST FORMAT

Perform a **GET** on the following endpoint.

</Persons/{id}/UpdateTimeStamp/?CountryCode={CountryCode}>

#### 1.38.2 REQUEST PARAMETERS

Field	Required	Comment
Id	Mandatory	Id of the Person
Country Code	Mandatory	Country Code of shopper

### 1.38.3 EXAMPLE REQUEST

GET <https://retailapi.apparel21.com/RetailAPI/Persons/4881/UpdateTimeStamp/?countryCode=AU>

Content-type: text/xml

Accept:version\_2.0

### 1.38.4 EXAMPLE RESPONSE

```
<PersonUpdateTimeStamp>
<PersonId>101451</PersonId>
<UpdateTimeStamp>2012-10-09T10:47:16</UpdateTimeStamp>
</PersonUpdateTimeStamp>
```

403	5205	Record not exist
403	5206	No Person Template Found

#### 1.40.7 UPDATE EXISTING PERSON

Update details for a Person by submitting a **PUT** to the following URI.

Note: all person data not supplied in the payload will be cleared off the person account except for Custom Data which still remains the same.

As person data can be updated in many places of Apparel<sup>21</sup> (retail API, POS, Person Maintenance), it is essential to get the latest person data before posting an update so that no changes are lost. To determine whether the latest data is being supplied, the “update time stamp” element is used. This supplied information must match the current status of the person for an update to be successful.

#### 1.40.8 URI REQUEST FORMAT

/Persons/{id}?countryCode={countryCode}

#### 1.40.9 REQUEST PARAMETERS

Field	Required	Comment
Id	Mandatory	Person id retrieved from the person <b>GET</b>
CountryCode	Mandatory	Country Code of Shopper

## 13 CARTS

The Shopping Cart is presented to the API to validate the contents and apply latest prices, promotions and freight as defined in Apparel<sup>21</sup>.

When you PUT a shopping cart to the API, the prices are checked and tax and any promotional discounts are calculated. Prices are not checked for products that are Gift Vouchers, the API will accept the price that is passed with the product.

Freight charges are also added as defined in the Apparel<sup>21</sup> back office setup. The returned Cart information can be used to generate the Order XML payload then call the API to create the actual Order. It is not mandatory to use the Cart function to generate the order payload.

**Note:** the contents of a cart are not stored by the API or Apparel<sup>21</sup>.

## 1.43 CART DETAILS

Field	Format	Max Length	Comment	Example	PUT Request	PUT Response	HTTP Header Accept:Version_
Id	Integer	22	Order Id	96854213	Optional	As per request	1.0
OrderNumber	Alpha	30	Unique Order Number	W0000125	Optional	As per request	1.0
PersonId	Integer	22	Unique Person Id	3583	Optional	As per request	1.0
SyncedAt	Date(YYYY-MM-DD)	10	Cart synchronisation date	7/07/2011 12:10:57 PM	Optional	Yes	1.0
TotalQuantity	Number	22	Total quantity of ordered products	125	Optional	Yes	1.0
TotalTax	Num(22,2)	22	Tax value calculated by API based on TaxPercent and CartDetail.Value)	10.95	No	Yes	1.0
TotalDiscount	Num(22,2)	22	Discount value (Calculated by API base on Sum of CartDetail.Discount)	20.16	Optional	Yes	1.0
TotalDue	Num(22,2)	22	Due value (Calculated by API base on Sum of individual product final value + freight value)	2000.25	Optional	Yes	1.0
TotalWeight	Num(22,2)	22	Total weight of goods (Calculated by API base on CartDetail.UnitWeight * CartDetail.Quantity)	1000	Optional	Yes	1.0
TaxAdjustment	Num(22,2)	22	Tax adjustment value. Product prices are initially shown with the tax rate based on the default Pricing Customer set up in Apparel21. If the tax rate for the final customer is different to this an adjustment value will be provided.	25	No	Yes	1.0
Addresses			<b>There are two addresses as part of the Order resource - Billing and Delivery. The following field definitions are common for both. Billing and Delivery are sub-elements of addresses.</b>				
AddressLine1	Alpha	50	Address line 1	Level 2	Optional	As per request	1.0

Field	Format	Max Length	Comment	Example	PUT Request	PUT Response	HTTP Header Accept:Version_
AddressLine2	Alpha	50	Address line 2	21 Cremorne Street	Optional	As per request	1.0
State	Alpha	50	State	VIC	Optional	As per request	1.0
Postcode	Alpha	10	Post code or ZIP code	3121	Optional	As per request	1.0

## 1.44 SUBMIT CART

The Cart details are submitted by a **PUT** to the following URI.

### 1.44.1 URI REQUEST FORMAT

/Carts/{id}?countryCode={countryCode}

### 1.44.2 REQUEST PARAMETERS

Field	Required	Comment
Id	Mandatory	Your Id for the cart
CountryCode	Mandatory	Country Code of Shopper

### 1.44.3 EXAMPLE REQUEST

PUT <https://retailapi.apparel21.com/RetailAPI/Carts/1234?countryCode=AU>

Content-type: text/xml  
Accept:version\_2.0

### 1.44.4 REQUEST PAYLOAD

```
<Cart>
<PersonId>101451<PersonId>
<CartDetails>
  <CartDetail>
    <Id>829</Id>
    <SkuId>21503</SkuId>
    <Quantity>2</Quantity>
    <Price>69.95</Price>
    <Value>139.90</Value>
  </CartDetail>
</CartDetails>
</Cart>
```

### 1.44.5 SUCCESS RESPONSE

HTTP Response		
200		

### 1.44.6 ERROR RESPONSE

HTTP Error	API Error Code	API Error Text
400	5033	No products in cart
403	5014	Size of field XXXX, 9999 is too long. Maximum length is 9999.

### 1.44.7 RESPONSE PAYLOAD

```
<Cart>
<SyncedAt>2012-10-09T12:05:47</SyncedAt>

    <Name>Standard</Name>
    <Value>10</Value>
  </FreightType>
</FreightOptions>
<TaxAdjustment>0</TaxAdjustment>
</Cart>

```

Tax, discounts and freight charges will be applied to the cart based on the configurations in Apparel<sup>21</sup>.

If tax is adjusted based on the customer settings in Apparel<sup>21</sup>, an adjustment to the standard website tax rate will be displayed here.

The cart update should be performed as products are added, deleted and/or quantities modified or if the date changes.

## 14 ORDERS

To create an order, either use the detail returned from the Cart PUT response, or generate the order detail independently.

The information at the root level of the Order payload contains detail about the customer (person), payment information, freight, and contact details. If Person details, i.e. address are changed when the order is posted, changes will be saved against that order only. The Person master file record is not modified unless the API receives a *PUT* to the person record.

The order detail contains product information to SKU level that the customer has ordered including

- Product Code
- Size (if applicable)
- Colour (if applicable)
- Pricing
- Discounts (if applicable)

When the order is created in Apparel<sup>21</sup> it is comprised of detail generated from the API and default information from Apparel<sup>21</sup>. Order details can also include orders entered directly into Apparel<sup>21</sup>, not via the website. This could be in store orders, telephone orders, returns and exchanges.

### 1.44.8 PRODUCT AND FREIGHT PRICING

The pricing shown on the order for products and freight can be generated from

- the cart PUT response
- generated from the website
- a combination of the above

In some instances the website will need to post pricing it has generated, for example freight rates or a special charge that does not have the price setup in Apparel<sup>21</sup>. When these details are added to the *create order* payload, they should show the tax rate that applies to the price that has been sent. For example if the Freight was \$10 and no tax applied the tax percentage should be shown as '0'.

```
<OrderDetail>
.....
<Quantity>1</Quantity>
<Price>10</Price>
<Value>10</Value>
<TaxPercent>0</TaxPercent>
.....
</OrderDetail>
```
